Section 1 Foreward

FOREWARD

An estimate of enrolment in private schools in the province of Manitoba for the period of 1981 to 1986 has been prepared by the Department of Education. The intention of the estimate is to provide some indication of the direction and magnitude of future enrolment fluctuations in order to facilitate planning of financial requirements. The enrolment estimate presented here should only be considered in conjunction with the purpose and assumptions under which these estimates were prepared.

The actual enrolment figures for the years 1973 to 1980, inclusive, represent the number of pupils who were attending private schools on September 30 of each year. This information was obtained from the Principal's Report submitted annually by each private school in the Province of Manitoba.

Similarily, the estimated enrolment figures for 1981 to 1986 represent the estimated number of pupils expected to be attending private schools on September 30 of each year.

Section II Assumptions and Methodology

ASSUMPTIONS AND METHODOLOGY

The estimates for September 30 1981 to 1986 were derived from a variety of sources. Information was obtained by interviewing a representative from the Catholic Schools, a representative from the Jewish Schools and the Dean of the University of Winnipeg Collegiate Division. In addition, questionnaires provided enrolment estimates from the individual schools. These were considered along with data received from the Department of Education Field Representatives.

For the purpose of the estimate, it was assumed that there would be no openings and/or closures, of schools. Additions and/or deletions of grades, and/or any building expansion were considered in the estimate and adjustments were made only when reliable information was available. Note that these factors are important when considering fluctuations in enrolment.

The methodology used in preparation of the estimated enrolments for grade II through to grade XII was derived primarily from retention rates. Historically these rates have been relatively reliable in estimating enrolment progression through the grades.

$$\text{RETENTION RATES} = \frac{\text{Total enrolment for 1977 to 1980 for a given grade}}{\text{Total enrolment for 1977 to 1980 for the preceding grade}}$$

Retention rates show the percentage of children that will proceed through the grades year by year. These rates served as the basis for determining a retention rate that could be systematically applied to enrolments in the immediately lower grade of the preceding year, to calculate an estimated enrolment for each grade.

In using the retention rate method for estimating enrolments, it is assumed that past trends in retention rates will continue

over the estimate period, 1981 to 1986. Implicit in the retention rates are such factors as migration, immigration, failures and dropouts which combine to form the historical trends upon which the retention rates are based.

Estimating special education, nursery, kindergarten and grade 1 enrolments pose a particular problem because enrolment in these programs bear little relationship to enrolment in preceding years and therefore retention rates are not applicable. These enrolments were estimated by observing historical and recent trends and attempting to predict which direction enrolment would move.
